

## INSTRUCTION SHEET

- 1** Fill the Baby Flogo with water so that the bubble head has one (1) inch of water above the bubble head. *(Water fill line marked inside reservoir, approximately 3.5 gallons)*
- 2** Next, add in 16 oz. of Flogo fluid.
- 3** Then, connect the helium tank, followed by connecting the air compressor to the quick connect fitting.
- 4** Set the air pressure regulator to 50 PSI. Next, set the green air valve to (10 or 15). Then, open the valve on your helium tank and set the green helium valve to (1).
- 5** Allow the foam to bubble and build up to fill the inside of the Baby Flogo unit.
- 6** Place a cover over the top to force out any air pockets as it is filling with foam.
- 7** When the foam is compressed in the unit, it will start to force its way out. Then you are ready to remove the cover and allow the foam through the stencil to create Baby Flogos! Slice at your desired thickness.
