Faux Snow - Instant Snow Powder

The Faux Snow Ground Cover by Global Special Effects is the most realistic artificial snow available on the market today. Unlike our Evaporative Snow® Machines, which create a falling snow effect that evaporates, this ground cover is a powder-based formula that transforms into a stunning, cold-to-the-touch snow when mixed with water. It creates a lasting, visually authentic instant snow effect—perfect for covering surfaces and bringing a true winter feel to any scene or setting.

INSTRUCTIONS:

1. Place 2 tbsp of Faux Snow in a clean container.
2. Place 1/2 cup of water and watch it slowly turn into snow!
[Mix ratio (Faux Snow Powder/Water) 1/4.5]
3. Mix until most of the water is absorbed.
4. Gradually add more water for the consistency of snow you prefer.
[Full mixing instructions, coverage chart, and SDS available.]
